Simply Smart !

telemecanique.com

This international site allows you to access all the Telemecanique products in just 2 clicks via comprehensive range data-sheets, with direct links to:

- Complete library: technical documents, catalogs, certificates, FAQs, brochures...
- Selection guides from the e-catalog.
- Product discovery sites and their Flash animations.

You will also find illustrated overviews, news to which you can subscribe, a discussion forum, the list of country contacts...

To live automation solutions every day!

Flexibility

- Interchangeable modular functions, to better meet the requirements for extensions
- Software and accessories common to multiple product families

Ingenuity

- Auto-adapts to its environment, "plug & play"
- Application functions, control, communication and diagnostics embedded in the products
- User-friendly operation either directly on the product or remotely

Simplicity

- Cost effective "optimum" offers that make selection easy for most typical applications
- Products that are easy to understand for users, electricians and automation specialists
- User-friendly intuitive programming

Compactness

- High functionality in a minimum of space
- Freedom in implementation

Openness

- Compliance with field bus, connection, and software standards
- Enabling decentralised or remote surveillance via the web with Transparent Ready products

Presentation

The Phaseo electronic switch mode power supply offer is designed to provide the DC voltage necessary for the PLC and automation system equipment control circuits. Comprising five ranges:

- Modular, Optimum and Universal for common applications
- AS-Interface for the AS-Interface cabling system
- Dedicated for repetitive equipment

the Phaseo offer meets all the needs encountered in industrial, commercial and residential applications. With phase-to-neutral (N-L1), phase-to-phase (L1-L2) or 3-phase (L1-L2-L3) connection to the line supply, these electronic switch mode power supplies provide a quality of output current that is suitable for the loads supplied and compatible with the line supply available in the equipment. Clear guidelines are given for selecting protection devices which are often used with them, and thus a comprehensive solution is provided that can be used in total safety.

Phaseo switch mode power supplies

Phaseo switch mode power supplies are totally electronic and their output voltage is regulated. The use of electronics makes it possible to significantly improve the performance of these power supplies, which offer:

- Very compact size
- Integrated overload, short-circuit, overvoltage and undervoltage protection (1)
- A very wide input voltage range for the Universal range
- A high degree of output voltage stability
- Good performance
- Diagnostics via LED indicators on the front panel
- Remote diagnostics via a relay contact for the Universal range

Phaseo power supplies deliver a stabilized --- output voltage that is precise to 3%, whatever the load from a \sim line supply, within the ranges of:

- For Modular, Optimum, Dedicated and AS-Interface ranges:
 - 100 to 240 V \sim for phase-to-neutral (N-L1) or phase-to-phase (L1- L2) connection
- For the Universal range:
 - 85 to 550 V \sim for phase-to-neutral (N-L1) or phase-to-phase (L1- L2) connection
 - 360 to 550 V \sim for 3-phase connection (L1-L2-L3)

Conforming to IEC standards and UL, CSA, TÜV and C-Tick certified, they are suitable for industrial use. The inclusion of overload and short-circuit protection makes downstream protection unnecessary if discrimination is not required. To provide discrimination whenever faults occur, it is advisable to use discriminating electronic downstream protection modules.

Phaseo power supplies also incorporate:

- An output voltage adjustment potentiometer in order to be able to compensate for any line voltage drops in installations with long cable runs
- Direct mounting on 35 mm --- rails, optional on Dedicated range (2)

(1) The inclusion of overload and short-circuit protection makes downstream protection unnecessary if discrimination is not required (see page 50).

(2) The Optimum and AS-Interface ranges can also take 75 mm --- rails.

Presentation (continued)

Phaseo switch mode power supplies (continued)

Phaseo regulated switch mode industrial supplies are offered in three ranges (Modular, Optimum and Universal), complemented by the range for the AS-Interface cabling system and the Dedicated range for repetitive machines:

Phaseo Modular range

The Phaseo Modular range meets all the needs of simple automation systems with power ratings from 7 to 60 W and an output voltage of 5 V \pm , 12 V \pm or 24 V \pm . The shape and compact nature of its casing mean that it can be incorporated either in a modular panel or mounted on a U rail in a cabinet. Direct mounting on a panel (using its two retractable lugs) and the choice of wires exiting at the top or bottom (except for the **ABL 7RM24025** model) make it an easy product to integrate.

Phaseo Optimum range

The Phaseo Optimum range is the low-cost solution for applications supplied in 12 V \pm , 24 V \pm or 48 V \pm and requiring currents between 3 and 5 A. The Optimum range of Phaseo power supplies delivers a voltage that can guarantee the PLC logic states, but in the event of an overload the power supply protection trips so that, once the fault has been eliminated, the power supply reverts to its nominal state.

Since the 24 V \pm Optimum range of Phaseo power supplies does not have PFC (*Power Factor Correction*), they do not meet the requirements of standard IEC/EN 61000-3-2 (except for **ABL 7RP1205/7RP4803** models).

Phaseo Universal range

The Universal range of Phaseo power supplies covers power ratings from 72 to 960 W in 24 V \pm and adapts to the majority of power distribution systems used throughout the world. The same power supply can thus be connected phase-to-neutral (N-L1) or phase-to-phase for line supplies ranging from 100 V \sim to 500 V \sim nominal. In addition, this range offers:

- Diagnostic functions (local or remote)
- User choice of operating mode in the event of an overload (current limiting or stop)
- Function modules to ensure continuity of service:
 - Protection against microbreaks or prolonged outages by means of the Buffer module and Battery control modules
 - Paralleling and redundancy functions by means of the Redundancy module
 - Discriminating protection against application overloads by means of discriminating electronic downstream Protection modules
- A power reserve (boost function) for absorbing the transient current peaks required by the application

With the Universal range of power supplies, it is possible to satisfy the need for auxiliary voltage (5 V \pm to 15 V \pm) using \pm / \pm Converter modules.

The incorporation of a PFC (*Power Factor Correction*) input filter reduces harmonic pollution to a minimum level across the entire Universal range, ensuring compliance with the requirements of standard IEC/EN 61000-3-2.

Phaseo AS-Interface range

The 72 and 144 W AS-Interface range of Phaseo power supplies is designed to deliver a voltage of 30 V \pm , which is a prerequisite for the AS-Interface cabling system. These electronic switch mode power supplies with phase-to-neutral (N-L1) connection ensure the quality of the output current in accordance with the electrical characteristics and in compliance with standard EN 50295.

Phaseo Dedicated range

The Dedicated range of Phaseo power supplies from 60 to 240 W is designed for integration in repetitive equipment requiring a voltage of 12 V \pm or 24 V \pm . These electronic switch mode power supplies, with phase-to-neutral (N-L1) connection, with or without anti-harmonic filter and UL 508, CSA and TÜV certified, meet all the needs encountered in commercial machines and standard catalog machines.

Characteristics of the 24 V --- operating voltage

The permissible tolerances for the operating voltage are listed in publications IEC/EN 61131-2 and DIN 19240.

For a nominal voltage U_n of 24 V --- , the extreme operating values are from - 15% to + 20% of voltage U_n , whatever the supply fluctuations in the range - 10% to + 6% (defined by standard IEC 38) with load variations in the range 0 to 100% of nominal current I_n .

All 24 V --- Phaseo power supplies are designed to provide an output voltage within these ranges.

It may be necessary to use a voltage measurement relay to detect when the normal voltage limits are being surpassed and to deal with the consequences of this. The Universal range has integrated voltage detection.

Recommendations for the use of 24 V --- voltage

The Phaseo range of power supplies can be used to supply control circuits with Protection Extra Low Voltage (PELV) or Safety Extra Low Voltage (SELV) in compliance with standard IEC 60364-4-41.

They have the following characteristics:

- Double insulation between the input circuit (connected to the line supply) and the low voltage output circuit via an integrated isolation transformer
- Internal device limiting the output voltage to less than 60 V in the event of an internal fault

Harmonic pollution (power factor)

The current drawn by a power supply is not sinusoidal. This leads to the generation of harmonic currents that pollute the distribution system. European standard IEC/EN 61000-3-2 limits the harmonic currents produced by power supplies.

This standard covers all devices between 75 and 1000 W, drawing up to 16 A per phase and connected directly to the public distribution system. Devices connected downstream of a private, low voltage general transformer are therefore excluded. Regulated switch mode supplies always consume harmonic currents; a filter circuit (*Power Factor Correction* or PFC) must therefore be added to comply with standard IEC/EN 61000-3-2.

The **ABL 8RPS/8RPM/8WPS 24●●0** Universal range and the **ABL 1RPM** Dedicated range of Phaseo power supplies comply with standard IEC/EN 61000-3-2 and can therefore be connected directly to public distribution systems.

Since the **ABL 8MEM240●●** Modular range and **ABL 7RM24025** and **ABL 1REM12050/24025** Dedicated range of Phaseo power supplies have power ratings of < 75 W, they are not subject to the requirements of standard IEC/EN 61000-3-2. They can therefore be connected directly to public distribution systems.

The **ABL 8REM** Optimum range and the **ABL 1REM** Dedicated range of Phaseo power supplies must only be connected downstream of a private, low voltage general transformer.

ABL 8MEM..... Zelio Logic

Switch mode power supplies: Modular range

The **ABL 8MEM/7RM** power supply offer is designed to provide the DC voltage necessary for the control circuits of automation system equipment consuming 7 to 60 W in 5, 12 and 24 V DC . Comprising six products, this range meets the needs encountered in industrial, commercial, and residential applications. These modular electronic switch mode power supplies provide a quality of output current that is suitable for the loads supplied and compatible with the **Zelio Logic** range. Clear guidelines are given on selecting the upstream protection devices which are often used with them, and thus a comprehensive solution is provided that can be used in total safety.

The Modular range of Phaseo power supplies can be connected in phase-to-neutral (N-L1) or in phase-to-phase (1) (L1-L2). They deliver a voltage that is precise to 3%, whatever the load and whatever the type of line supply, within a range of 85 to 264 V \sim . Conforming to IEC standards and UL, CSA and TUV certified, they are suitable for universal use. The inclusion of overload and short-circuit protection makes downstream protection unnecessary if discrimination is not required.

Due to their low power, the Modular range of Phaseo power supplies consume very little harmonic current and thus are not subject to the requirements of standard IEC/EN 61000-3-2 concerning harmonic pollution.

All the Modular range of Phaseo power supplies have protection devices to ensure optimum performance of the automation system with an automatic reset mode on elimination of the fault.

All products are equipped with an output voltage adjustment potentiometer in order to be able to compensate for any line voltage drops in installations with long cable runs.

These power supplies also have a cable run inside the unit so that the outputs can be connected at the top or bottom of the product as required.

These power supplies are designed for direct mounting on 35 mm DIN rails, or on a mounting plate using their retractable fixing lugs.

There are six references available in the Phaseo Modular range:

Output characteristics

Behavior in the event of short-circuits and overloads

Phaseo power supplies are equipped with an electronic protection device.

In the event of an overload or short-circuit, the integrated protection interrupts the current supply before the output voltage drops below 19 V.

The output voltage reverts to its nominal value on elimination of the fault, which avoids having to take any action.

Derating

The ambient temperature is a determining factor that limits the power an electronic power supply can deliver continuously. If the temperature around the electronic components is too high, their life will be significantly reduced.

The nominal ambient temperature for the Modular range of Phaseo power supplies is 55°C. Above this temperature, derating is necessary up to a maximum temperature of 70°C (except for the ABL 7RM24025 model).

The graph below shows the power as a percentage of the nominal power that the power supply can deliver continuously, depending on the ambient temperature.

- 1 With an ABL 7RM24025
- 2 With an ABL 8MEM series

Temporary overloads

The ABL 8MEM series Modular range of power supplies have an energy reserve that can be used to supply the application with 125% to 140% of the nominal output current for a maximum of 1 minute, depending on the model.

Switch mode power supplies: Optimum range

The **ABL 8REM/7RP** power supply offer is designed to provide the DC voltage necessary for the control circuits of automation system equipment consuming 60 to 144 W in 12, 24 and 48 V --- . Comprising four products, this range meets the needs encountered in industrial, commercial, and residential applications. With phase-to-neutral (N-L1) or phase-to-phase (1) (L1-L2) connection, these slim electronic switch mode power supplies provide a quality of output current that is suitable for the loads supplied and compatible with both the **Twido** range and the smallest **Modicon M340** configurations, making them ideal partners. Their simplified characteristics in comparison with the Universal offer also make them the low-cost solution for applications less affected by problems with the line supply, such as harmonic pollution and outages. Clear guidelines are given on selecting the upstream protection devices which are often used with them, and thus a comprehensive solution is provided that can be used in total safety.

The Optimum range of Phaseo power supplies delivers a voltage that is precise to 3%, whatever the load and whatever the type of line supply, within a range of 85 to 264 V \sim . Conforming to IEC standards and UL, CSA and TUV certified, they are suitable for universal use. The inclusion of overload and short-circuit protection makes downstream protection unnecessary if discrimination is not required.

ABL 8REM power supplies do not have an anti-harmonic filter and do not satisfy the requirements of standard IEC/EN 61000-3-2 concerning harmonic pollution.

ABL 7RP power supplies, however, are equipped with a PFC (*Power Factor Correction*) filter, thus ensuring compliance with standard IEC/EN 61000-3-2.

All the Optimum range of Phaseo power supplies have protection devices to ensure optimum performance of the automation system with an automatic reset mode on elimination of the fault.

In the event of an overload or short-circuit, the integrated protection interrupts the current supply before the output voltage drops below 19 V --- . The protection device resets itself automatically on elimination of the fault, which avoids having to take any action or change a fuse.

All products are equipped with an output voltage adjustment potentiometer in order to be able to compensate for any line voltage drops in installations with long cable runs.

These power supplies are designed for direct mounting on 35 and 75 mm --- rails.

There are four references available in the Optimum range of Phaseo power supplies:

Output characteristics

Derating

The ambient temperature is a determining factor that limits the power an electronic power supply can deliver continuously. If the temperature around the electronic components is too high, their life will be significantly reduced.

The nominal ambient temperature for the Optimum range of Phaseo power supplies is 50 °C. Above this temperature, derating is necessary up to a maximum temperature of 60 °C.

The graph below shows the power as a percentage of the nominal power that the power supply can deliver continuously, depending on the ambient temperature.

1 ABL 8REM, ABL 7RP mounted vertically

Derating should be considered in extreme operating conditions:

- Intensive operation (output current permanently close to the nominal current, combined with a high ambient temperature)
- Output voltage set above 24 V --- (to compensate for line voltage drops, for example)
- Parallel connection to increase the total power

General rules to be complied with

Intensive operation	See derating on above graph. Example for ABL 8REM: - Without derating, from 0°C to 50°C - Derating of nominal current by 2%, per additional °C, up to 60°C
Rise in output voltage	The nominal power is fixed. Increasing the output voltage means that the current delivered must be reduced.
Parallel connection to increase the total power	The total power is equal to the sum of the power supplies used, but the maximum ambient temperature for operation is 50°C. To improve heat dissipation, the power supplies must not be in contact with each other.

In all cases, there must be adequate convection around the products to assist cooling. There must be sufficient clearance around the Optimum range of Phaseo power supplies:

- 50 mm above and below
- 15 mm on the sides

Phaseo Universal range

ABL 8RPS24050 --- Modicon M340 automation platform

Switch mode power supplies: Universal range

The **ABL 8RPS/RPM/WPS** power supply offer is designed to provide the DC voltage necessary for the control circuits of automation system equipment. Comprising six products, this range meets the needs encountered in industrial and commercial applications. These compact electronic switch mode power supplies provide a quality of output current that is suitable for the loads supplied and compatible with the **Modicon M340, Premium and Quantum** ranges. When used with additional function modules, they ensure continuity of service in the event of network power outages or application malfunctions. Clear guidelines are given on selecting the function modules and upstream protection devices which are often used with them, and thus a comprehensive solution is provided that can be used in total safety.

The Universal range of Phaseo power supplies must be connected in phase-to-neutral or phase-to-phase for **ABL 8RPS/RPM**, and in 3-phase for **ABL 8WPS**. They deliver a voltage that is precise to 3%, whatever the load and whatever the type of line supply, within the ranges:

- 85 to 132 V ~ and 170 to 550 V ~ for **ABL 8RPS**
- 85 to 132 V ~ and 170 to 264 V ~ for **ABL 8RPM**
- 340 to 550 V ~ for **ABL 8WPS**

Their very wide input voltage range allows a considerable reduction of parts held in stock and offers a distinct advantage in terms of machine design.

Conforming to IEC standards and UL and CSA certified, they are suitable for universal use.

ABL 8RPS/RPM and ABL 8WPS power supplies are all equipped with a harmonic filter, ensuring compliance with standard IEC/EN 61000-3-2 concerning harmonic pollution.

All the Universal range of Phaseo power supplies have protection devices to ensure optimum performance of the automation system. Their operating mode can be configured as required by the user:

- **Manual reset protection mode:** Priority is given to the voltage so as to guarantee the PLC logic states and nominal operation of the supplied actuators.
- **Automatic reset protection mode:** Priority is given to the current to allow troubleshooting for example, or to ensure continuity of service until the arrival of the maintenance team.

The Universal range of Phaseo power supplies also has a power reserve, allowing them to deliver a current of 1.5 I_n at regular intervals. This avoids the need to oversize the power supply if the device has a high inrush current, while ensuring optimum performance of the automation system.

The diagnostics for the Universal range of Phaseo power supplies are available on the front of the device via LEDs (U_{out} and I_{out}) and via a volt-free relay contact (whether or not the PLC states are guaranteed).

All products are equipped with an output voltage adjustment potentiometer in order to be able to compensate for any line voltage drops in installations with long connection cable runs.

These power supplies are designed for direct mounting on a 35 mm rail.

Switch mode power supplies: Universal range (continued)

There are four references available in the Universal range of Phaseo power supplies for phase-to-neutral or phase-to-phase connection:

■ ABL 8RPS24030	72 W	3 A	24 V ---
■ ABL 8RPS24050	120 W	5 A	24 V ---
■ ABL 8RPS24100	240 W	10 A	24 V ---
■ ABL 8RPM24200	480 W	20 A	24 V ---

The Universal range of Phaseo power supplies also features two references for 3-phase connection:

■ ABL 8WPS24200	480 W	20 A	24 V ---
■ ABL 8WPS24400	960 W	40 A	24 V ---

A range of function modules also allows functions to be added to the Universal range of Phaseo power supplies so as to ensure continuity of service:

- A Buffer module or Battery control modules combined with their batteries to ensure continuity of service in the event of a network power outage (see selection tables on pages 38 and 39)
- A Redundancy module to meet the most demanding requirements for continuity of service even if the power supply fails
- Downstream electronic Protection modules to ensure that the protection in the application is discriminating
- Converter modules delivering nominal voltages of 5 and 12 V --- from the 24 V --- output of the Universal range of Phaseo power supplies

Description

Universal range of power supplies

The Universal range of Phaseo regulated switch mode power supplies,

ABL 8RPS24●●0/RPM24200/WPS24●00, comprise:

- 1 Spring clip for 35 mm U_L rail
- 2 4 mm² enclosed screw terminals for connection of the AC voltage (single-phase, phase-to-phase or 3-phase connection)
- 3 Protective glass flap
- 4 Clip-on marker label
- 5 Locking catch for the glass flap (sealable)
- 6 Protection mode selector
- 7 Output voltage adjustment potentiometer
- 8 Output voltage status LED (green and red)
- 9 Output current status LED (green, red and orange)
- 10 Screw terminals for connection of the diagnostic relay contact, except **ABL 8RPS24030**
- 11 4 mm² (10 mm² on **ABL 8WPS24●00** and **ABL 8RPM24200**) enclosed screw terminals for connection of the DC output voltage

Technical characteristics

Type of power supply		ABL 8RPS24030	ABL 8RPS24050	ABL 8RPS24100	ABL 8RPM24200	
Certifications		CB scheme IEC/EN 60950-1, UL, cCSAus, C-Tick, C€				
Conformity to standards	Safety	IEC/EN 60950-1, IEC/EN 61204-3, SELV

Output characteristics

Derating

The ambient temperature is a determining factor that limits the power an electronic power supply can deliver continuously. If the temperature around the electronic components is too high, their life will be significantly reduced.

The nominal ambient temperature for the Universal range of Phaseo power supplies is 50°C. Above this temperature, derating is necessary up to a maximum temperature of 60°C.

The graph below shows the power (in relation to the nominal power) that the power supply can deliver continuously, depending on the ambient temperature.

ABL 8RPM, ABL 8RPS, ABL 8WPS mounted vertically

- Derating should be considered in extreme operating conditions:
- ☐ Intensive operation (output current permanently close to the nominal current, combined with a high ambient temperature)
 - ☐ Output voltage set above 24V (to compensate for line voltage drops, for example)
 - ☐ Parallel connection to increase the total power

General rules to be complied with

Intensive operation	See derating on above graph. Example for ABL 8RPS: - Without derating, from 0°C to 50°C - Derating of nominal current by 2%, per additional °C, up to 60°C
Rise in output voltage	The nominal power is fixed. Increasing the output voltage means that the current delivered must be reduced.
Mounting	To allow heat dissipation, the power supplies must not be in contact with each other.

- In all cases, there must be adequate convection around the products to assist cooling. There must be sufficient clearance around the Universal range of Phaseo power supplies:
- ☐ 50 mm above and below
 - ☐ 10 mm on the sides

Output characteristics (continued)

Behavior in the event of overloads

Behavior in the event of overloads:

■ **Automatic reset protection mode (current limiting):** If the output current exceeds approximately $1.2 I_n$, the output current is limited to this value. The value of the output voltage can then be less than 21 V but the diagnostic relay opens, allowing the anomaly to be fed back to the automation system and thus prevent feedback of any undefined logic state. On elimination of the overload, the output voltage reverts to its preset value.

■ **Manual reset protection mode (undervoltage detection):** If the output current exceeds approximately $1.2 I_n$, the power supply stops completely before the output voltage drops below 21 V and no longer delivers any current. The fault is memorized as long as voltage is present at the power supply primary. The power supply will become operational again, if the fault has disappeared, after de-energizing the primary for a few seconds.

Nota : In both these modes, any overload of less than $1.5 I_n$ and lasting less than 4 s will be absorbed by the "boost" circuit and the voltage delivered will stay within the specified limits (adjustment voltage $\pm 3\%$).

Load limit

Manual reset protection mode

ABL 8RPM24200/ABL 8RPS24●●●/ABL 8WPS24●●●

Automatic reset protection mode

ABL 8RPM24200/ABL 8RPS24●●●/ABL 8WPS24●●●

"Boost" repeat accuracy

The **ABL 8RPS/RPM/WPS** Universal range of Phaseo power supplies has a power reserve, allowing them to supply the application with energy up to 1.5 times the nominal current at the intervals illustrated by the graph opposite.

The "boost" amplitude and repeat accuracy depend on:

- ☐ The overload duration
- ☐ The overload intensity
- ☐ The period between each consumption peak

When the power supply can no longer cope (repeated overloads, overload duration > 4 seconds, power rating > 150% of nominal power) the integrated protection trips.

This type of operation is described in detail in the user manual, which can be downloaded from our website, www.telemecanique.com.

Behavior in the event of phase failure on three-phase power supplies

The **ABL 8WPS24●00** Universal range of Phaseo power supplies is capable of starting and delivering a nominal current and voltage for a few minutes in the event of failure of one phase. Their protection (thermal) then trips and they are reset automatically.

Output characteristics (continued)

Series or parallel connection

Series connection

Parallel connection

Family	Series	Parallel
ABL 8RPS/8RPM/8WPS	2 products max. (1)	2 products max.

Nota : Series or parallel connection is only recommended for products with identical references.

For better availability, the power supplies can also be connected in parallel using the **ABL8 RED24400** Redundancy module.

Single-phase (L-N) 100 to 120 V

Phase-to-phase (L1-L2) 200 to 500 V

3-phase (L1-L2-L3) 3 x 380 to 500 V

Single-phase (L-N) 200 to 500 V

Supplying 5 V \square and 12 V \square auxiliary voltages

The Phaseo range offers modules that convert the 24 V \square voltage to a 5 to 15 V \square voltage.

These modules can be used to make savings in the:

- ☐ Upstream protection normally used with the 5 to 15 V \square power supply
- ☐ Connection to the line supply

There are two references available for this solution:

- **ABL 8DCC05060** : 5...6.5 V \square , 6 A converter module
- **ABL 8DCC12020** : 7...15 V \square , 2 A converter module

Description

5 V \square and 12 V \square Converter modules

The front panel of the **ABL 8DCC●●0●0** \square/\square Converter modules comprises:

- 1 Spring clip for 35 mm \square rail
- 2 Protective glass flap
- 3 Clip-on marker label
- 4 Locking catch for the glass flap (sealable)
- 5 Output voltage adjustment potentiometer
- 6 Output current status LED (green)
- 7 4 mm² enclosed screw terminals for connection of the 24 V \square input voltage
- 8 4 mm² enclosed screw terminals for connection of the 5 V \square or 12 V \square output voltage

Presentation

The **ABL 8** Function module offer complements the **ABL 8RPS/RPM/WPS** electronic switch mode power supply offer, thus forming a set of solutions to meet the needs for continuity of service in the most demanding applications.

These modules, connected to the electronic switch mode power supply outputs, offer solutions such as:

- Immunity to microbreaks (see pages 38 to 45)
- Voltage holding in the event of power outages (see pages 38 to 45)
- Voltage holding in the event of power supply equipment failure (see pages 46 to 49)
- Discrimination in the application's protection against overloads and short-circuits (see pages 50 to 53)

Continuity of service: Immunity to microbreaks

ABL 8RPS/RPM/WPS power supplies can deliver their nominal power in the event of a microbreak of less than 20 ms. When outages exceed this value, the **ABL 8BUF24400** Buffer Function module, combined with an **ABL 8 RPS/RPM/WPS** Universal power supply, is used. In the event of short interruptions, the Buffer module takes over and continues to provide the 24 V \pm voltage. The table below indicates the maximum time for immunity to microbreaks t_1 .

Power supply		Typical time for immunity to microbreaks with Buffer module (40 A) at Un t1	
		100% load at the Buffer module output	2 A at the Buffer module output
ABL 8RPS24030	Single-phase or 2-phase 3 A, 72 W	0.912 s	0.984 s
ABL 8RPS24050	Single-phase or 2-phase 5 A, 120 W	0.472 s	1.33 s
ABL 8RPS24100	Single-phase or 2-phase 10 A, 240 W	0.220 s	1.34 s
ABL 8RPM24200	Single-phase or 2-phase 20 A, 480 W	0.206 s	1.82 s
ABL 8WPS24200	3-phase 20 A, 480 W	0.056 s (1)	1.18 s
ABL 8WPS24400	3-phase 40 A, 960 W	0.092 s (1)	1.29 s

Nota : In order to maximize the immunity time, it is advisable to connect only those circuits requiring protection against microbreaks (controller or PLC power supply) at the Buffer module output.

(1) Values liable to increase significantly. Please consult our website www.telemecanique.com

Continuity of service: Voltage holding in the event of a power outage (continued)

For applications that are sensitive to unintended stopping, the **ABL 8** range of Function modules offers a solution comprising:

- Electronic switch mode power supply and Buffer module for holding times t_2 up to two seconds
- Electronic switch mode power supply, Battery control module and Battery module for holding times t_2 of between two seconds and a few hours

These solutions are used to supply voltage after loss of the line supply, thus enabling saving of current values or fallback of some actuators supplied with 24 V $\overline{\text{---}}$.

The table below indicates the possible holding times according to the equipment combinations and the current required.

Holding current	Holding time t2																											
	Seconds								Minutes															Hours

Function modules	Reference	Code
40 A Buffer module	ABL 8BUF24400	1
20 A Battery control module	ABL 8BBU24200	2
40 A Battery control module	ABL 8BBU24400	3
3.2 Ah Battery module	ABL 8BPK24A03	4
7 Ah Battery module	ABL 8BPK24A07	5
12 Ah Battery module	ABL 8BPK24A12	6

Nota : Several Buffer modules (up to a maximum of three) can be connected in parallel to increase the immunity time. The times given in the table above (boxes marked 1) should be multiplied by the number of modules used (2 or 3).

Description

40 A Buffer module

The front panel of the **ABL 8BUF24400** Buffer Function module comprises:

- 1 Spring clip for 35 mm U_L rail
- 2 Clip-on marker label
- 3 LED indicator (green): module ready (maximum load)
- 4 10 mm² enclosed screw terminals for connection of the 24 V --- input voltage
- 5 10 mm² enclosed screw terminals for connection of the 24 V --- output voltage
- 6 Removable screw terminal block for connection of the diagnostic contact: module ready (maximum load)

20 A and 40 A Battery control modules

The front panel of the **ABL 8BBU24000** Battery control Function modules comprises:

- 1 Spring clip for 35 mm U_L rail
- 2 Clip-on marker label
- 3 Memory card slot for backup and duplication of the configuration parameters
- 4 Display and configuration parameter browse/selection button
- 5 Removable screw connector for connection of the battery voltage inhibit input (terminal block supplied)
- ⚠ This contact must always be volt-free.
- 6 Removable screw connector for connection of the diagnostic contacts: power supply presence, battery alarm and presence (terminal block supplied)
- 7 10 mm² enclosed screw terminals for connection of the 24 V --- output voltage
- 8 10 mm² enclosed screw terminals for connection of the power supply 24 V --- input voltage
- 9 10 mm² enclosed screw terminals for connection of the battery voltage 24 V --- input voltage

3.2 Ah, 7 Ah, and 12 Ah Battery modules

The front panel of the **ABL 8BPK24000** Battery Function modules comprises:

- 1 A metal box that can be fixed on a vertical or horizontal panel
- 2 Fuse carrier (one or two depending on the model), which, in addition to protecting the output, can be used to disable the battery module (fuse supplied but not fitted)
- 3 10 mm² enclosed screw terminals for connection of the Battery module 24 V --- output voltage (depending on the model, allows two Battery modules to be connected in parallel)
- 4 Fuse storage attachment

Green: Nominal status/information

Orange: Warning

Red: Fault

Examples of Battery control module diagnostic screens

Functions

ABL 8BBU24●00 Battery control modules

The main module functions are:

- Charging and checking the associated battery
- Automatic switching between the power supply and the battery in the event of a power outage
- Diagnostics

The Battery control modules offer a three-color LCD screen and a navigation button that can be used to:

- Display the status and diagnostic data
- Access the service and maintenance functions
- Set the module parameters

These modules also have a diagnostic relay (C/O contacts) relating to:

- The power supply status
- The Battery module status
- The alarm

The following functions are available:

- Inhibition or activation (local or remote) of the battery to ensure the safety of maintenance operations on the application
- Battery test
- Backup and download of a configuration via a memory card enabling storage and duplication of the configuration parameters so as to eliminate repetitive operations when setting up the Battery control modules

The module parameters can be set in order to define:

- The user language
- The rating of the battery connected to the Battery control module
- The operating temperature for the battery in order to optimize its life
- The length and cross-section of the connection to compensate for voltage losses due to the length of the line
- The duration of the battery-powered supply
- The threshold voltage provided by the power supply below which the battery takes over

Whichever solution is used, the output terminals for the power supplies, Buffer modules and Battery control modules have been designed to make it easier to isolate a backed-up circuit and a non-backed-up circuit to ensure discrimination in continuity of service after a power outage.

ABL 8BPK24A●● Battery modules

Each Battery module consists of:

- Lead-sealed batteries (two in series)
- Its automotive type fuse protection

Only these modules are compatible with the **ABL 8BBU** Battery control modules.

In the event of the Battery control module-Battery module combination not being used for long periods (approximately 1 week minimum) the following is recommended:

- Fully charge the Battery module for at least 72 hours, then
- Remove the fuse(s) from the Battery module(s) and store them in the allocated slots [2](#)

Continuity of service: Failure of power supply equipment

Where continuous operation of the application is the prime concern, it is necessary to ensure that when one power supply malfunctions, a second power supply takes over. The **ABL 8RED24400** Redundancy module can perform this function, ensuring that the failure of one power supply does not disturb the second (for example, in the event of a short-circuit of one of the power supply outputs).

The **ABL 8RED24400** Redundancy module, used with two electronic switch mode power supplies of the same type, can be used to supply the nominal power to the application even if one of the power supplies fails.

The various diagnostics - on the front panel (LED) and remote (relay) - inform the maintenance team as soon as the first fault occurs on one of the power supplies.

When continuity of service is critical for the application, it may be necessary to provide redundancy for the Redundancy module. See schemes page 48

Nota : The Redundancy module can be used to connect two power supplies with a maximum rating of 20 A in parallel. To connect two 40 A **ABL 8WPS24400** power supplies, two **ABL 8RED24400** Redundancy modules must be used.

Description

2 x 20 A Redundancy module

The **ABL 8RED24400** Redundancy Function module comprises:

- 1 Spring clip for 35 mm rail
- 2 Clip-on marker label
- 3 Input voltage status LED (green) for the first 24 V power supply
- 4 Input voltage status LED (green) for the second 24 V power supply
- 5 10 mm² enclosed screw terminals for connection of the 24 V output voltage
- 6 10 mm² enclosed screw terminals for connection of the input voltage for the second 24 V power supply ($I \leq 20$ A)
- 7 10 mm² enclosed screw terminals for connection of the input voltage for the first 24 V power supply ($I \leq 20$ A)
- 8 Removable screw terminal block for connection of the diagnostic contact: power supply connected to a faulty input

Phaseo Universal range: Function modules

Solution for discriminating protection of the application

Continuity of service: Discrimination of protection against overloads and short-circuits

There is no point in using thermal-magnetic circuit-breakers or fuses downstream of an electronic switch mode power supply in the majority of cases. When a short-circuit or very quick overload occurs in the application, the electronic protection is faster than the thermal-magnetic circuit-breaker or fuse. In this case, none of the circuits are powered.

To provide discriminating protection in the event of an overload or short-circuit, the Universal Phaseo power supply electronic protection function has been integrated in four-channel modules. These discriminating downstream Protection modules can be daisy-chained to provide protection discrimination on as many application segments as necessary.

The **ABL 8PRP24100** discriminating downstream Protection modules have:

- Overload and short-circuit protection on each of their four channels:
 - Each channel can be calibrated by the user from 1 to 10 A, according to the needs of the application
 - One fuse per channel (15 A supplied by default) assures ultimate protection in the event of a module fault. This fuse can be replaced by a fuse with a lower rating that is appropriate for the conductor c.s.a. used for cabling. see separate part page 52.
- A 2-pole isolator on each of its channels
- An automatic or manual reset mode for the protection
- Memorization of the fault even in the event of failure of the 24 V --- voltage to be protected
- A diagnostic relay indicating that all channels are operational
- One diagnostic LED per channel
- Manual reset on the front panel
- One switch per channel that can be used, like thermal-magnetic circuit-breakers, to open or close the circuits during test, maintenance or installation periods

Description

2-pole downstream electronic Protection modules

The front panel of the **ABL 8PRP24100** 4-channel downstream electronic Protection modules comprises:

- 1 10 mm² enclosed screw terminals for connection of the 24 V --- voltage to be protected
- 2 Enclosed screw terminals for connection of the diagnostic relay contact
- 3 Line protection fuses (one 15 A fuse per channel by default)
- 4 Automatic or manual reset mode selector
- 5 Reset pushbutton
- 6 Diagnostic LEDs (green and red) and clip-on marker tag holder (1 per channel)
- 7 1...10 A output nominal current selector (1 per channel)
- 8 Channel isolator switch (1 per channel)
- 9 Locking catch for the glass flap (sealable).
- 10 4 mm² enclosed screw terminals for connection of the four channels (2-pole)
- 11 Protective glass flap
- 12 Retractable fixing lugs for panel mounting (— rail mounting also possible)

Presentation

ABL 1REM/RPM Phaseo Dedicated range regulated switch mode power supplies are specially designed to provide the d.c. voltage necessary for electrical equipment operating on a safety extra low voltage (SELV). Split into two ranges, they are able to meet all the needs encountered in standard commercial machines.

These single-phase power supplies, with or without anti-harmonic distortion filter, conform to world-wide standards. Switch mode technology guarantees the quality of the output current with regulation below 3%.

As machine components, **ABL 1REM/RPM** Phaseo Dedicated range power supplies must be easy to install; only setting-up may vary from one application to another. The ABL 1 range has been specially designed for machine manufacturers.

ABL 1REM/RPM regulated switch mode power supplies are totally electronic and regulated. They provide the following benefits:

- A wide input voltage range from 85 to 264 V ~ and 120 to 370 V --- (not indicated on the product).
- Products with anti-harmonic distortion input filter.
- A high degree of output voltage stability, adjustable by potentiometer.
- Built-in thermal overload protection.
- Conformity to world-wide standards.
- Conformity to standard EN 55022 class B.
- UL 508, CSA and TÜV certifications.
- Overload and short-circuit protection.
- Considerably reduced weight.
- Identical mounting accessories for all models.

ABL 1 power supplies for electrical equipment are split into two ranges :

- **ABL 1REM**, single-phase:
 - 60 W for the 12 V --- version,
 - 60 W, 100 W, 150 W and 240 W for the 24 V --- versions.
- **ABL 1RPM**, single-phase with anti-harmonic distortion filter:
 - 100 W for the 12 V --- version,
 - 100 W, 150 W and 240 W for the 24 V --- versions.

Electromagnetic compatibility

Levels of conducted and radiated emissions are defined in standards EN 55011 and EN 55022.

The products in the ABL 1 range are class B, the strictest level, and can be used without any restrictions due to their low emissions..

Behaviour in the event of short-circuits

ABL 1 power supplies are equipped with electronic and thermal overload protection. This protection resets itself automatically on elimination of the fault, which avoids having to take any action or change a fuse.

Description

ABL 1REM/RPM regulated switch mode power supplies comprise:

- 1 Two fixing holes for M4 x 20 screws.
- 2 A 115/230 V input voltage selector (on 150 W and 240 W versions only).
- 3 A 4 mm² screw clamp terminal block for connection of the AC input voltage and DC output voltage.
- 4 A green LED indicating presence of the d.c. output voltage.
- 5 An output voltage adjustment potentiometer ($\pm 10\%$).
- 6 A removable, transparent, clip-on cover.

Phaseo Dedicated range

Output characteristics

Derating

The ambient temperature is a determining factor which limits the power that an electronic power supply can deliver continuously. If the temperature around the electronic components is too high, their life will be significantly reduced.

ABL 1R•M24100 (240 W) power supplies are mechanically ventilated as from an ambient temperature > 40 °C approx., or for a load rating > 90 % approx.

The rated ambient temperature for **ABL 1REM/1RPM** power supplies is + 50 °C. Above this, derating is necessary up to a maximum temperature of + 60 °C.

The curves below show the power (in relation to the nominal power) which the power supply can deliver continuously, according to the ambient temperature.

Extreme operating conditions

Derating should be considered in extreme operating conditions:

- intensive operation (output current permanently close to the nominal current, combined with a high ambient temperature),
- output voltage set above 24 V (to compensate for line voltage drops, for example),
- parallel connection to increase the total power.

General rules to be complied with

Intensive operation	See derating on above curves. Example for ABL 1 mounted vertically: <ul style="list-style-type: none">- without derating, from 0 °C to 50 °C,- derating of nominal current by 4 %, per additional °C, up to 60 °C.
Rise in output voltage	The nominal power is fixed. Increasing the output voltage means that the current delivered must be reduced.
Parallel connection to increase the power	The total power is equal to the sum of the power supplies used, but the maximum ambient temperature for operation is 50 °C. To improve heat dissipation, the power supplies must not be in contact with each other.

In all cases, there must be adequate convection round the products to ensure easier cooling. There must be a clear space of 50 mm (1.97 inch) above and below the power supplies, and of 20 mm (0.79 inch) at the sides.

Power supplies and transformers

Power supplies for control circuits for

AS-Interface cabling system

Regulated switch mode power supplies

Phaseo AS-Interface range

Power supplies for AS-Interface cabling system

Consistent with the standard Phaseo line, the range of **ASI ABL** power supplies is designed to deliver a \sim voltage, as required by AS-Interface cabling systems. Three versions are available to meet all needs encountered in industrial applications, in enclosures, cells or floor-standing enclosures. These single-phase, electronic, switch mode power supplies guarantee the quality of the output current, in accordance with the electrical characteristics and conforming to standard EN 50295.

ASI ABLB300●

Operating on a 100 to 240 V \sim supply, this power supply delivers a voltage of 30 V \sim . Available in 2.4 and 4.8 A ratings, the outgoing terminal block allows the cable to be connected separately to the AS-Interface interface modules and to the AS-Interface master. Input and output LEDs allow fast and continuous diagnostics.

ASI ABLB3002

ASI ABLD300●

Operating on a 100 to 240 V \sim supply, this power supply delivers a voltage of 30 V \sim . Available in 2.4 and 4.8 A ratings, it allows diagnosis and management of earth faults on AS-Interface interface modules. In the event of an earth fault, the Phaseo power supply stops dialogue on the AS-Interface cabling system and puts the installation in a fallback condition. Restarting is only possible after deliberate acknowledgement of the fault. Two inputs/outputs enable dialogue with a processing unit. The outgoing terminal block is used to connect the AS-Interface cable separately to the interface modules and master modules. Input, output and earth fault LED's allow fast and continuous diagnostics.

ASI ABLD3004

ASI ABLM3024

Operating on a 100 to 240 V \sim supply, this product provides two separate power supplies, which are totally independent in the way they operate. Two output voltages - 30 V/2.4 A (AS-Interface line supply) and 24 V/3 A - are available, so making it possible to supply the control equipment without an additional power supply. Input and output LEDs allow fast and continuous diagnostics.

ASI ABLM3024

Technical characteristics														
Type of power supply			ASI ABLB3002		ASI ABLB3004		ASI ABLD3002		ASI ABLD3004		ASI ABLM3024			
Functions			Supply to the AS-Interface line (30 V ---)								30 V --- supply		24 V --- supply	
Product certifications			UL 508, CSA 22.2 No. 950, TÜV 60950-1											
Conforming to standards	Safety		EN 60950-1											
	EMC		EN 50081-1, IEC/EN 61000-6-2, EN 55022 class B											
	Low frequency harmonic currents		No

Operating characteristics														
Connections	Input	mm ²	2 x 2.5 screw terminals + earth											
	Output	mm ²	2 x 2.5 screw terminals + earth, multiple output											
Environment	Operating temperature	°C	0 to + 60 (derating from 50, see page 62)											
	Storage temperature	°C	- 25 to + 70											
	Maximum relative humidity		95 % (without condensation or dripping water)											
	Degree of protection		IP 20, conforming to IEC/EN 60529											
	Vibrations		Conforming to IEC/EN 61131-2											
Operating position			Vertical											
MTBF		h	> 100000 (conforming to Bell core, at 40 °C)											
Dielectric strength 50 Hz during 1 min	Input/output	V rms	3000											
	Input/earth	V rms	3000											
	Output/earth (and output/output)	V rms	500											
Input fuse incorporated			Yes (not interchangeable)											
Emission according to EN 61000-6-3	Conducted/radiated		Class B (conforming to EN 55022)											
Immunity according to IEC/EN 61000-6-2	Electrostatic discharge		IEC/EN 61000-4-2 (4 kV contact/8 kV air)											
	Radiated lectromagnetic field		IEC/EN 61000-4-3 level 3 (10 V/m)											
	Induced electromagnetic field		IEC/EN 61000-4-6 (10 V/m)											
	Rapid transients		IEC 61000-4-4 level 3 (2 kV),											
	Primary outages		IEC 61000-4-11 (voltage dips and interruptions)											

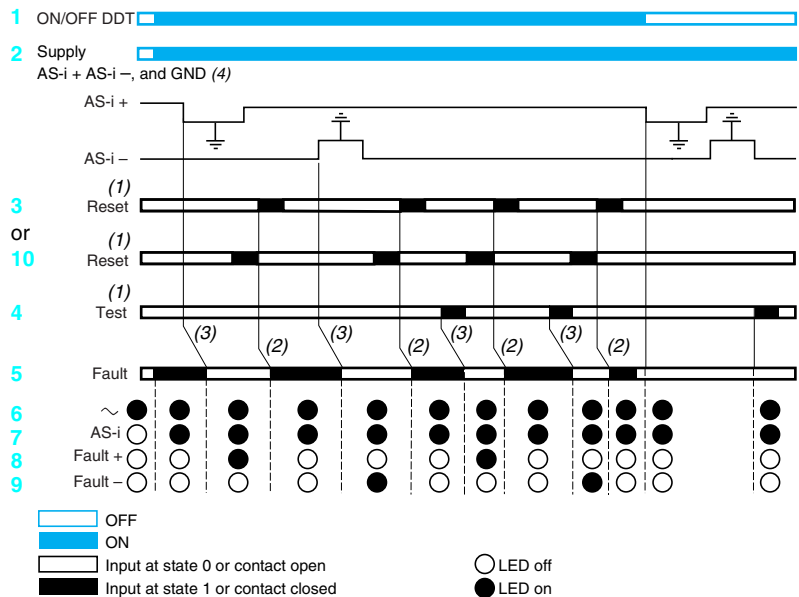

Output characteristics

Derating

The ambient temperature is a determining factor which limits the power that an electronic power supply can deliver continuously. If the temperature around the electronic components is too high, their life will be significantly reduced. The graph below shows the power (in relation to the nominal power) which the power supply can deliver continuously, according to the ambient temperature.

Function diagram

(1) 30 ms min.

(2) 15 ms.

(3) 20 ms.

(4) Warning: the earth fault detector will only operate if the earth (GND) terminal is connected.

Warning

The earth (GND) (4) connection must be made. In the event of disconnection, the built-in detector becomes inoperative. To obtain earth connection diagnostics, it is recommended that an ASI_ABLD300 power supply be used with built-in insulation control.

An appearance of accidental earth fault triggers, in the following cases, the activation of built-in protection:

- case 1: fault between AS-i "+" and earth,
- case 2: fault between AS-i "-" and earth,
- case 3: fault between sensors/actuators (supplied by ASI_ABLD300) and earth.

Depending in the case:

- Cases 1, 2 with switch 1 ON -> OFF: maintain of fault, any exchange between master and slaves.
- Case 3 with switch 1 ON -> OFF: restart of exchanges between master and slaves but the states of inputs/outputs of affected module are not guaranteed.

ABL 8FEQ24040

ABL 8FEQ24000

ABL 8TEQ

ABL 8FEQ/8TEQ power supplies

The **ABL 8FEQ/8TEQ** range of power supplies is designed to provide the DC voltage necessary for the control circuits of automation system equipment. Comprising two families, this range meets all the needs encountered in industrial, commercial and residential applications. With phase-to-neutral or 3-phase connection, of the conventional type with rectifier, they provide a quality of output current that is suitable for the loads supplied and compatible with the line supply available in the equipment. Clear guidelines are given for selecting protection devices which are often used with them, and thus a comprehensive solution is provided that can be used in total safety.

Filtered rectified power supplies

Filtered rectified power supplies are built using a safety transformer equipped with a bridge rectifier and smoothing capacitors.

With no regulation system, and of simple and rugged construction, their output voltage will withstand line voltage variations and load variations while remaining within the range defined in standards IEC/EN 61131-2.

These power supplies are split into two families:

- The **ABL 8FEQ** family, with phase-to-neutral or phase-to-phase connection, rectified and filtered, enables connection to European 230/400 V line supplies. Power supplies from 0.5 A to 4 A are available for direct mounting on a rail.
- The **ABL 8TEQ** family, with 3-phase connection, filtered and rectified, is particularly suitable where a high power level is required for controlling actuators and preactuators. This is especially true for "All 24 V ---" equipment, or for pilot operation of DC valves and solenoid valves.

Selection of power supplies

Quality of the line supply

Rectified power supplies provide a non-regulated voltage, sensitive to load and line supply fluctuations. They can only be used on good-quality line supplies, with fluctuations limited to -10%... + 10% of the nominal value.

Graphs showing the output voltage as a function of the current, the load and the input voltage for **ABL 8FEQ** and **ABL 8TEQ** supplies are given on pages 67 and 68.

If the quality of the line supply is not suitable for a rectified power supply, a regulated supply must be used.

Harmonic pollution (power factor)

By design, **ABL 8FEQ** and **ABL 8TEQ** rectified power supplies consume very little harmonic current; they meet the requirements of standard EN 61000-3-2 and can therefore be connected directly to public distribution systems.

Behavior in the event of short-circuits

In the event of an overload or short-circuit, rectified power supplies must be protected by a downstream fuse or circuit-breaker to prevent their destruction. **ABL 8FEQ** models up to 6 A are fitted with a 5 x 20 mm glass fuse and do not need any external downstream protection.

Presentation

The Phaseo **ABL 6TS** and **ABT 7** single-phase transformers offer is designed to supply control circuits in electrical equipment from a 230 V ~ or 400 V ~ supply (depending on the model) at 50 or 60 Hz. ± 15 V connectors at the primary ensure adaptation to the actual values of the supply networks to which they are connected.

Universal range (25 VA to 2500 VA)

This range of transformers with double winding features a particularly innovative design and offers high-level characteristics (depending on the model) such as:

- 230 V/400 V ~ ± 15 V input voltage
- 2 x 115 V or 2 x 24 V ~ output voltage
- Clip-on  rail mounting (depending on the model) or panel mounting (using 4 screws)
- Series or parallel connection of secondary winding and grounding via internal jumpers
- LED indicator
- Operating temperature of 60°C
- cURus, ENEC certifications

All these components are concealed behind a plastic cover making it easier to integrate the Universal range of Phaseo transformers in control cabinets.

Optimum range (25 VA to 2500 VA)

The following characteristics demonstrate the suitability of this tried and tested range of single-winding transformers for standard applications:

- 230 V/400 V ~ ± 15 V input voltage
- 12 V, 24 V, 115 V or 230 V ~ output voltage
- Panel mounting, using 4 screws (or clip-on  rail-mounting option available depending on the model)
- Operating temperature of 50°C
- cURus certifications

Economic range (25 VA to 400 VA)

This range of simplified single-winding transformers is primarily designed for repetitive applications and offers the following as standard:

- 230 V ~ ± 15 V input voltage
- 24 V ~ output voltages
- Panel mounting using 4 screws
- Operating temperature of 40°C

ABL 6TS and **ABT 7** transformers provide enhanced electrical isolation between the line supply and the application. The whole range features an electrostatic screen to limit the spread of electromagnetic interference and improve user safety.

Protection

The transformers can be protected against short-circuits by means of fuses or thermal-magnetic circuit-breakers mounted on the secondary.

For operation in compliance with UL standards, short-circuit protection must be achieved using fuses (UL approved) mounted on the primary.

Where the control circuit is isolated from the ground (IT system), a leakage detector will indicate any accidental ground faults.

Description

- 1 Mounted using 4 screws or, depending on the model in the Universal range, by clipping on a 35 mm  rail
- 2 Screw terminals with ± 15 V connectors for connection of the AC input voltage
- 3 Clip-on marker tag or self-adhesive marker tag holder **AR1 SB3**
- 4 LED (green) indicating presence of input voltage (depending on the model in the Universal range)
- 5 Access to the jumpers for selecting the secondary connection (opened using a screwdriver)
- 6 Windows (depending on the model in the Universal range) for viewing the connection via jumpers of the:
 - 0 V to ground (J1 jumper)
 - Series connection, totally freeing up the "customer" secondary wiring capacity (J3 jumper)
 - Parallel connection, totally freeing up the "customer" secondary wiring capacity (J2 and J4 jumpers)
- 7 Screw terminals for connection of the AC output voltage

ABT 7PDU002...7PDU032

Power supplies and transformers

Safety and isolation transformers (25 to 2500 VA)

Selection

ABL 6TS and **ABT 7** transformers are characterized by the apparent nominal power they can supply continuously. However, they are also designed to supply, when necessary, significantly higher powers, such as contactor inrush peaks.

Contactor inrush peaks can reach 10 to 20 times the required holding current. This leads to the transformer being oversized in relation to the continuous power it has to supply. The transformer must be sized so that the voltage drop at its terminals, caused by the inrush, remains within the permissible limits for the contactor to close properly.

The two power values that need to be taken into account to determine which transformer rating to use are therefore:

- The continuous power the transformer has to supply
- The maximum inrush power it has to provide

In practice, only the sum of the holding currents and the largest contactor inrush current need to be considered.

For **ABL 6TS** transformers, the graph below can be used to select the appropriate rating according to these two currents. This ensures a maximum voltage drop of 5% at the moment of inrush, compatible with correct operation of the entire installation. However, these transformers have been designed for continuous operation at nominal load and at an ambient temperature of 50°C. A reduction in the ambient temperature may uprate the transformer, which, in some cases, allows a lower rating to be used. The graph below has therefore been drawn up for ambient temperatures of 35...50°C.

The inrush values of the contactor coils are given on the contactor control circuit characteristics pages.

Example: A device with a total holding current of 200 VA and inrush current of the largest contactor of 700 VA can be supplied by a 630 VA transformer if it is used at an ambient temperature of 50°C. A 400 VA transformer is sufficient if the ambient temperature is 35°C.

Technical information

Automation products certifications

In some countries, certification of certain electrical components is enforced by law. A standard conformity certificate is then issued by the official organization. Each certified product must carry approval symbols when enforced. Use on board merchant navy vessels generally requires prior approval (= certification) of an electrical device by certain marine classification authorities.

Key	Certification body	Country
CSA	Canadian Standards Association	Canada
C-Tick	Australian Communication Authority	Australia
GOST	Gost Standard Scientific Research Institute	C.I.S., Russia
UL	Underwriters Laboratories	USA
Key	Classification authority	Country
IACS	International Association of Classification Societies	International
ABS	American Bureau of Shipping	USA
BV	Bureau Veritas	France
DNV	Det Norske Veritas	Norway
GL	Germanischer Lloyd	Germany
LR	Lloyd's Register	United Kingdom
RINA	Registro Italiano Navale	Italy
RMRS	Russian Maritime Register of Shipping	C.I.S.

The table below shows the situation as at 01.09.2007 for certifications obtained or pending from organizations for base PLCs. An overview of certificates for Telemecanique products is available on our Internet website:

www.telemecanique.com

Community regulations

European directives

The opening of European markets implies a harmonization of regulations in the various European Union member states.

European Directives are documents used to remove obstacles to the free movement of goods and their application is compulsory in all states of the European Union.

Member states are obliged to transcribe each Directive into their national legislation and, at the same time, to withdraw any conflicting regulations.

The Directives, particularly those of a technical nature with which we are concerned, only set objectives, called "general requirements".

The manufacturer must take all necessary measures to ensure that his products conform to the requirements of each Directive relating to his equipment.

As a general rule, the manufacturer affirms that his product conforms to the necessary requirements of the Directive(s) by applying the **CE** marking.

The **CE** marking is applied to Telemecanique products where relevant.

The significance of **CE** marking

■ The **CE** marking on a product means that the manufacturer certifies that his product conforms to the relevant European Directives; it is necessary in order that a product which is subject to a Directive(s) can be marketed and freely moved within the European Union.

■ The **CE** marking is intended solely for the national authorities responsible for market regulation.

For electrical equipment, conformity of the product to standards indicates that it is suitable for use. Only the guarantee of a recognized manufacturer provides an assurance of high quality.

One or more Directives, as appropriate, may apply to our products, in particular:

■ The Low Voltage Directive 72/23/EEC amended by Directive 93/68/EEC: The **CE** marking under the terms of this Directive is compulsory as of January 1, 1997.

■ The Electromagnetic Compatibility Directive 89/336/EEC, amended by Directives 92/31/EEC and 93/68/EEC: The **CE** marking on the products covered by this Directive has been compulsory since January 1, 1996.

■ Directive **CE** ATEX 94/9/EC.

The efficiency of Telemecanique branded *solutions*

Used in combination, Telemecanique products provide quality solutions, meeting all your **Automation & Control** applications requirements.

A worldwide presence

Constantly available

- More than 5 000 points of sale in 130 countries.
- You can be sure to find the range of products that are right for you and which complies fully with the standards in the country where they are used.

Technical assistance wherever you are

- Our technicians are at your disposal to assist you in finding the optimum solution for your particular needs.
- Schneider Electric provides you with all necessary technical assistance, throughout the world.
